WASTEWATER

(AN R PACKAGE)

DEVELOPING AN R PACKAGE IN COLLABORATION WITH THE MICHIGAN DEPARTMENT OF HEALTH AND HUMAN SERVICES' WASTEWATER TEAM

Julie (Jules) Gilbert, Jeremy Kuo, Lillian Jensen, Marisa Eisenberg

Internal Laboratory Automated Pipeline → MDHHS Project Collaborations / Delphi Project Collaborations / Internal Laboratory Projects → Discussion & Meetings with MDHHS About Re-launch of Wastewater Program → wastewateR!

Small projects built trust and a comprehensive code set, leading to an R package that could provide code-based support for the MDHHS Wastewater Team. This format has proven to be a unique way to balance STLT partner needs with additional detail and functionality for others.

Wastewater DRIP
Data Reporting & Integration Portal

WASTEWATER FEATURES

QA/QC Processing Functions
Flexible for different methodologies and naming conventions, there are a suite of functions for checking data for potential errors.

Modular & Flexible Wrappers
Wrapper functions link together the QA/QC processing functions for single call, single plate check capability.

Unit Calculations & Limit of Detection
Functions for transforming laboratory data into single measurements per sample, as well as ascertaining limit of detection values

INTEGRATED INTO DRIP, MDHHS'S DATA PROCESSING, REPORTING & STORAGE PIPELINE

Work on this R package continues to evolve and expand! Future plans include:

- Previous and current WVAL calculations, with optional modifications
- Messaging Alert functions for positive/negative calls, or changes in levels
- Outlier detection functions and methodology
